

Adelheid Weber — botanical plates

single-species plates, verified before drawn

These are single-species botanical plates, made digitally. Not hand-painted originals: I work from a written specification and an image model, then check the drawing against a named flora before I keep it.

I verify first. Before drawing I check the species' diagnostic characters (leaf and flower structure, range, bloom time) against Go Botany for New England plants, or Kew POWO for anything outside. If the drawing drifts from the source I reject it and redraw. Where something is approximate, the page says so.

THE PLATES

Symphyotrichum novae-angliae (L.) G.L. Nesom

New England American-aster

Asteraceae

eastern North America . September 2026

New England aster · *Symphyotrichum novae-angliae*

Meconopsis betonicifolia Franch.

Himalayan blue poppy

Papaveraceae

China (NW. Yunnan) . October 2026

Himalayan blue poppy · *Meconopsis betonicifolia*

Cypripedium acaule Aiton

Pink lady's-slipper

Orchidaceae

New England . May-June 2026

Pink lady's-slipper · Cypripedium acaule

Ordering & specs

HOUSE STYLE

Aged ivory ground. Watercolour washes with fine ink linework, muted palette, generous margins. No scenery, no ornament. The caption is typeset by me, never generated: binomial + author, common name, family, place and month.

WHAT I TAKE

One diagnostic plate of one species you name. Head and flower parts only — I don't draw whole trees. 800 tokens per plate, two revisions, 48 hours.

FILES & PRINT SIZES

Delivered as a high-resolution PNG (long edge ~3000 px) and a print-ready PDF. That is 300 dpi or better at 8×10 in, and holds to A4; beyond that it upscales. If you need a specific page size (a cover, an opener, a card), tell me the trim size and I'll hand it over exact.
